

Personal Profile

A recent Computing for Games graduate from Falmouth University with a 2:1, specialising in gameplay programming, graphics and A.I. Experience in shipping Unreal Engine 5 and Unity projects, with strong knowledge in agile development workflows. Final year dissertation explored AI-driven chatbot personality perception, combining Python development with user research. Comfortable working across the full development cycle from architecture to debugging and delivery. Brings an understanding of technical and collaborative sides of development, having worked across gameplay systems, graphics, and AI research within the same degree.

Skills

Languages: Python, C# , C++, HTML, CSS, SQL

Engines & Tools: Unreal Engine 5, Unity, OpenGL, Git/Version Control, VS Code, Visual Studio

Practices: Agile, Scrum, Kanban (Trello), Object-Oriented Programming (OOP), Version Control Workflows, Technical Documentation

Education

2022–2025 **BSc(Hons) Computing for Games**, *Falmouth University*, Falmouth, Upper 2:1

Key modules: Data Fundamentals, Computational Mathematics, Graphics and Simulation, Major Collaboration

Final Year Project: Dissertation - To What Extent are Users Able to Recognise Personality Traits from a Chatbot?

2020–2022 **BTEC Computing for Creative Industries & Physics A-Level**, *Longsands Sixth Form*, St Neots

Subject	Grade	Subject	Grade
Computing	Distinction*Distinction*	Physics	E

Key modules: Planning and Management of Computing Projects, Computer Games Development, Software Development, Website Development.

2015–2020 **GCSEs**, *Ernulf Academy*, St Neots, 9 GCSEs at grade 7-4 including English and Maths

Projects

Co-Operation A year long group project where we created a co-op Unreal Engine 5 game. Focusing on agile management, couch co-op and wacky physics. Personally responsible for enemy AI, player and project management. Primarily using blueprinting. Each system required iterative testing and debugging across the development cycle to ensure stable performance and a well rounded user experience.

Technologies: UE5, Blueprinting, C++, Agile, Scrum, Kanban

Itch.io: <https://cheese-dynamics-games.itch.io/cooperation>

OpenGL Lorenz System In my computer graphics module I used OpenGL to create a particle system that can display Lorenz Systems. I used ImGui to allow users to change constants in the equation and dynamically change the amount of particles. Demonstrated ability to implement complex mathematical concepts in real-time simulations and build interactive controls.

GitHub: <https://github.com/benada482/OpenGL-LorenzSystem.git>

AI Chatbot - Dissertation Built a Python interface for text-based conversation with a locally hosted DeepSeek LLM, conducted user research into whether chatbot personality traits can be perceived. Combined software development with academic research methodology.

Experience

2024-25 **Co-Operation**, *Falmouth University*, Falmouth

As lead programmer on a 10-person UE5 project, I created core gameplay systems and was responsible for weekly build creation and delivery for sprint reviews. Ran scrum and sprint planning alongside other members, and presented technical progress directly to supervisors across multiple milestones. Coordinated integration across the team and maintained technical documentation and version control throughout the project. Demonstrated ability to collaborate across disciplines, resolve technical disagreements under deadline pressure, and maintain team cohesion across a year long project.

2021-25 **Leisure Assistant**, *One Leisure*, St Neots, Cambridgeshire

Supported daily operations in a high-traffic customer-facing environment. Demonstrated reliability, time management, and the ability to work effectively under pressure across four years of work.
